Front-end engineer

Hello there! I'm a front-end engineer fascinated with inner workings of the web, browsers, JavaScript and library internals. Committed to delivering high-quality web applications.

Experienced in international team collaboration and fluent in English, I leverage my extensive quality assurance background to bridge development and testing communication.

I use my hobby project, an F1 statistics and telemetry visualization application, to hone my skills in both front-end and back-end development.

I closely follow the new technologies, approaches and trends of web development.

Experience

March 2024 - December 2024

Junior Frontend Developer

Stenn International (Fintech)

Developed user interface for automation of compliance- and fraud-related processes of the company using React + Vite;

Ensured unit-test coverage of said features;

Migrated the product's team features to the internal design system UI kit.

December 2022 - February 2024

QA Automation Engineer

Stenn International (Fintech)

Conducted automated testing of user interfaces and APIs (pytest + Selenium);

Assisted in development of the UI testing framework and mocks;

Optimised the product team's testing practices and coverage

April 2020 - November 2022

QA Automation Engineer

IBS Appline

Performed UI and API testing of web- and SAP-based applications

July 2019 - February 2020
